

Problem Statement: Create a sample web application using MERN stack to capture the loan application process. Web page should contain the tabular form filling process(sample as shown in below screenshot)

The screenshot shows a web interface with three tabs at the top: 'TAB 1', 'TAB 2', and 'TAB 3'. 'TAB 1' is the active tab. Below the tabs, the text 'Tab 1' is displayed. Underneath, there is a form area containing a single line of placeholder text: 'Sed ut perspiciatis unde omnis iste natus error sit voluptatem accusantium doloremque laudantium, totam rem aperiam, eaque ipsa quae ab illo inventore veritatis et quasi architecto beatae vitae dicta sunt explicabo.'

or you can be creative and design your own flow apart from tab but it should be good looking and modern UI design.

Each tab will capture following details –

1. Personal details (various form fields like first name, last name, age, mobile no. & other personal details)
2. Business details (various form fields like applicant's business name, GST no, address and other basic business details)
3. Loan Application details (various form fields like loan amount, interest rate, loan tenure etc.)

All the data captured during application process should be saved in DB.

Code should be clean, with all validations.

In case of any query do reach out to us.
